

Oxford and Cambridge Club provides Wireless Access

Basingstoke, 12 April 2006: REACT Technologies Ltd has deployed an Aruba Wireless Network solution throughout the prestigious Oxford and Cambridge Club in Pall Mall, London. Enjoyed since 1821 by members of Oxford and Cambridge Universities who come from all corners of the world, the club is a place to stay, hold meetings and attend various functions and banquets as well as the traditional daily use as a ‘members club’ with extensive libraries and reading rooms.

Club Secretary, Mr Gordon Buchanan said, “We had a growing demand for Internet access from all private and public areas of the Club. The installation of a guest and visitor wireless network is seen as an important service for our members. Our main concern for deployment was operational simplicity. We needed to have a solution that essentially looked after itself, something the Aruba solution gives us. The centralised Aruba controller controls access by members securely and it manages and protects our network and our member’s equipment for anti-virus policies and importantly against unauthorised intrusion.”

About REACT

REACT, headquartered in Basingstoke, Hants, was established in 2003 by former employees of technology giant Ericsson, to offer corporate customers – and particularly those with a large distributed workforce – the cost savings and enhanced security that wireless networking can bring.
